Fermilab, Batavia, IL, January 1990,**

Who am I? – 2

- Professor at U. Texas Arlington (2001 – present)
 - Led the design and implementation of D-Zero computing grid
 - Led the group on discovery of Higgs in WW final states
 - Led International Linear Collider detector R&D beam testing
 - Joined ATLAS @ LHC 2005 and led the grid computing user services
 - Led a subgroup in LHC Higgs Cross section working group
 - Contributed to 2012 Higgs discovery ([see the TV interview](#)) and the subsequent precision property measurements
 - Moved to neutrino experiment and created and leading the Beyond the Standard Model physics group till 2021 (1st ever in the community!)
 - Constructed two DUNE field cages (2018&2022) for Prototypes @CERN
 - To construct half the FC and the whole FC for first two 17,000t modules
 - Leading the technical design of the 2nd 17,000t module HV system

What is High Energy Physics (HEP)?

- **The elevator talk:** A subfield of physics that seeks to understand what makes up the universe and what the fundamental forces between them are
- Known forces (interactions):
 - Gravitational Force
 - Electromagnetic Force
 - Weak Nuclear Force
 - Strong Nuclear Force
- Current theory: The Standard Model of Particle Physics (SU3xSU2XU1)
- Most important: **Ask yourselves why, what and how?**

HTC, HEP & the Society
Dr. Jaehoon Yu

HEP and the Standard Model

- Total of 16 particles (12+4 force mediators) make up all the visible matter in the universe! \rightarrow Simple and elegant!!!
- Tested to a precision better than 1 part per million!

Some remaining issues in HEP..

- Why is the mass range so large ($0.1m_p - 175 m_p$)?
- Is the particle discovered at the LHC really the Higgs particle?
- Why is the matter in the universe made only of particles?
- Neutrinos have mass!! (**OMG!! The SM is broken!!!**)
 - What are the mixing parameters, particle-anti particle asymmetry and the neutrino mass ordering?
- Why are there only four apparent forces?
 - Were they all unified at the Big Bang?

Me!

HTC, HEP & the Society
Dr. Jaehoon Yu

Dec. 7, 2022

11

How does a nuclear power plant work?

**My 1000 year dream: Skip the whole thing!
Make electricity directly from nuclear forces!**

Dec. 7, 2022

HTC, HEP & the Society
Dr. Jaehoon Yu

12

So what's the problem?

- Why is the mass range so large ($0.1m_p - 175 m_p$)?
- Is the particle we discovered really the Higgs particle?
- Why is the matter in the universe made only of particles?
- Neutrinos have mass!! What are the mixing parameters, particle-anti particle asymmetry and mass ordering?
- Why are there only four apparent forces?
 - Were they all unified at the Big Bang?
- Is the picture of the universe we present the real thing?

What makes up the universe?

So what's the problem?

- Why is the mass range so large ($0.1m_p - 175 m_p$)?
- Is the particle we discovered really the Higgs particle?
- Why is the matter in the universe made only of particles?
- Neutrinos have mass!! What are the mixing parameters, particle-anti particle asymmetry and mass ordering?
- Why are there only four apparent forces?
 - Were they all unified at the Big Bang?
- Is the picture of the universe we present the real thing?
- Are there any other particles we don't know of?
 - Big deal for the new LHC Run that started now and in the new experiments starting up in the US!
- Where do we all come from?
- Can we live well in the universe as an integral partner?

Accelerators are **Powerful Microscopes.**

They make high energy particle beams that allow us to see small things.

seen by
low energy beam
(poorer resolution)

seen by
high energy beam
(better resolution)

Accelerators are also **Time Machines.**

They make particles last seen
in the earliest moments of the universe.

Particle and anti-particle annihilate.

$$E = mc^2$$

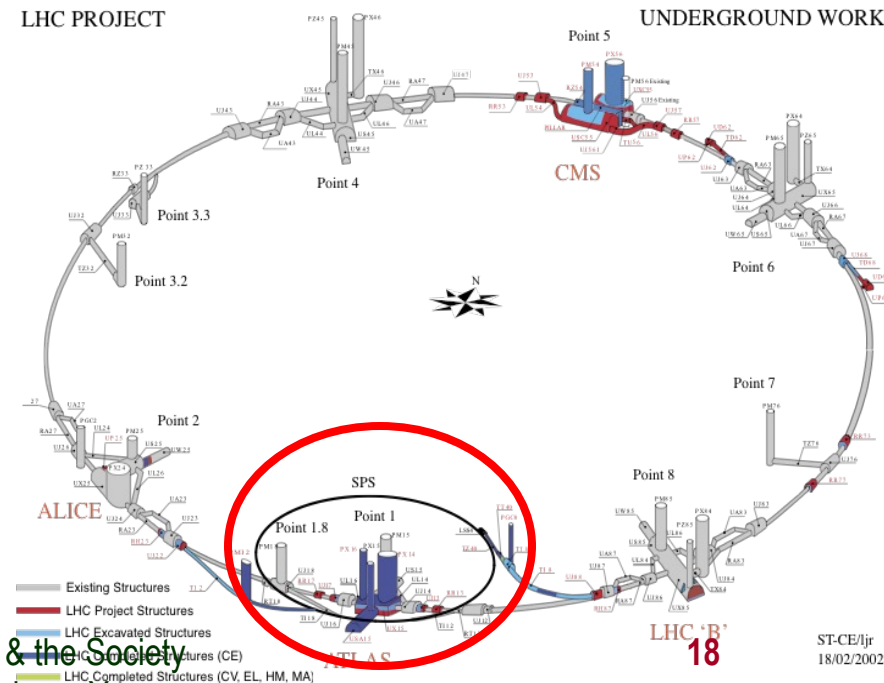

Fermilab Tevatron and LHC at CERN

World's Highest Energy proton-anti-proton collider

- 4km (2.5mi) circumference
- $E_{cm}=2\text{ TeV} (=6.3 \times 10^{-7}\text{ J/p} \rightarrow 13\text{M Joules on the area smaller than } 10^{-4}\text{m}^2)$
- Same as the KE of a 20t truck w/ speed 130km/hr
 - ~100,000 times the energy density at the ground 0 of the Hiroshima atom bomb
- **Tevatron was shut down in 2011**
- **New frontiers with high intensity proton beams including the search for dark matter with beams!!**

World's Highest Energy p-p collider

- 27km (17mi) circumference, 100m (300ft) underground
- Design $E_{cm}=14\text{ TeV} (=44 \times 10^{-7}\text{ J/p} \rightarrow 362\text{M Joules on the area smaller than } 10^{-4}\text{m}^2)$
- KE of a B727 (80t) w/ speed 310km/hr
 - ~3M times the energy density at the ground 0 of the Hiroshima atom bomb
- **Discovered a new heavy particle that looks Higgs in 2012**
- **Search for new particles has been ongoing!!**
- **The LHC started back up in 2021 at high intensity**

Dr. Jaehoon Yu

The Problem

- Detectors are complicated and large → Need large number of collaborators
 - They are scattered all over the world!

LHC Collaborations

ATLAS

CMS

**ATLAS+CMS over 6000 Physicists and Engineers
Over 60 Countries, 250 Institutions**

The Map of the DUNE Experiment

- >1400 collaborators
- >200 institutions
- >30 countries + CERN

<https://www.dunescience.org/about-the-collaboration/>

Dec. 7, 2022

HTC, HEP & the Society
Dr. Jaehoon Yu

26

CM@Manchester, UK/Sept. 2022

The Problem

- Detectors are complicated and large → Need a large number of collaborators
 - They are scattered all over the world!
 - How do we get them communicate quickly and efficiently?
 - How do we leverage collaborators' capabilities?
 - How do we efficiently utilize all the computing resources?
- Data size is large $\gg 10$ PB per year for raw data only
 - Entire data set 15+PB on disc
 - Where and how to store the la
 - How do we allow collaborators to access data in an efficient f

ATLAS Data at CERN 2010-Jun 2012

The Problem, cont'd

- How do we allow people's analysis jobs to access data and make progress rapidly and securely?
 - What is the most efficient way to get jobs' requirements matched with resources?
 - Should jobs go to data or data go to jobs?
 - What level of security should there be?
- How do we allow experiments to reconstruct data and generate the large amount of simulated events quickly?
 - How do we garner the necessary compute and storage resources effectively and efficiently?
 - What network capabilities do we need in the world?
- How do we get people to analyze at their desktops?

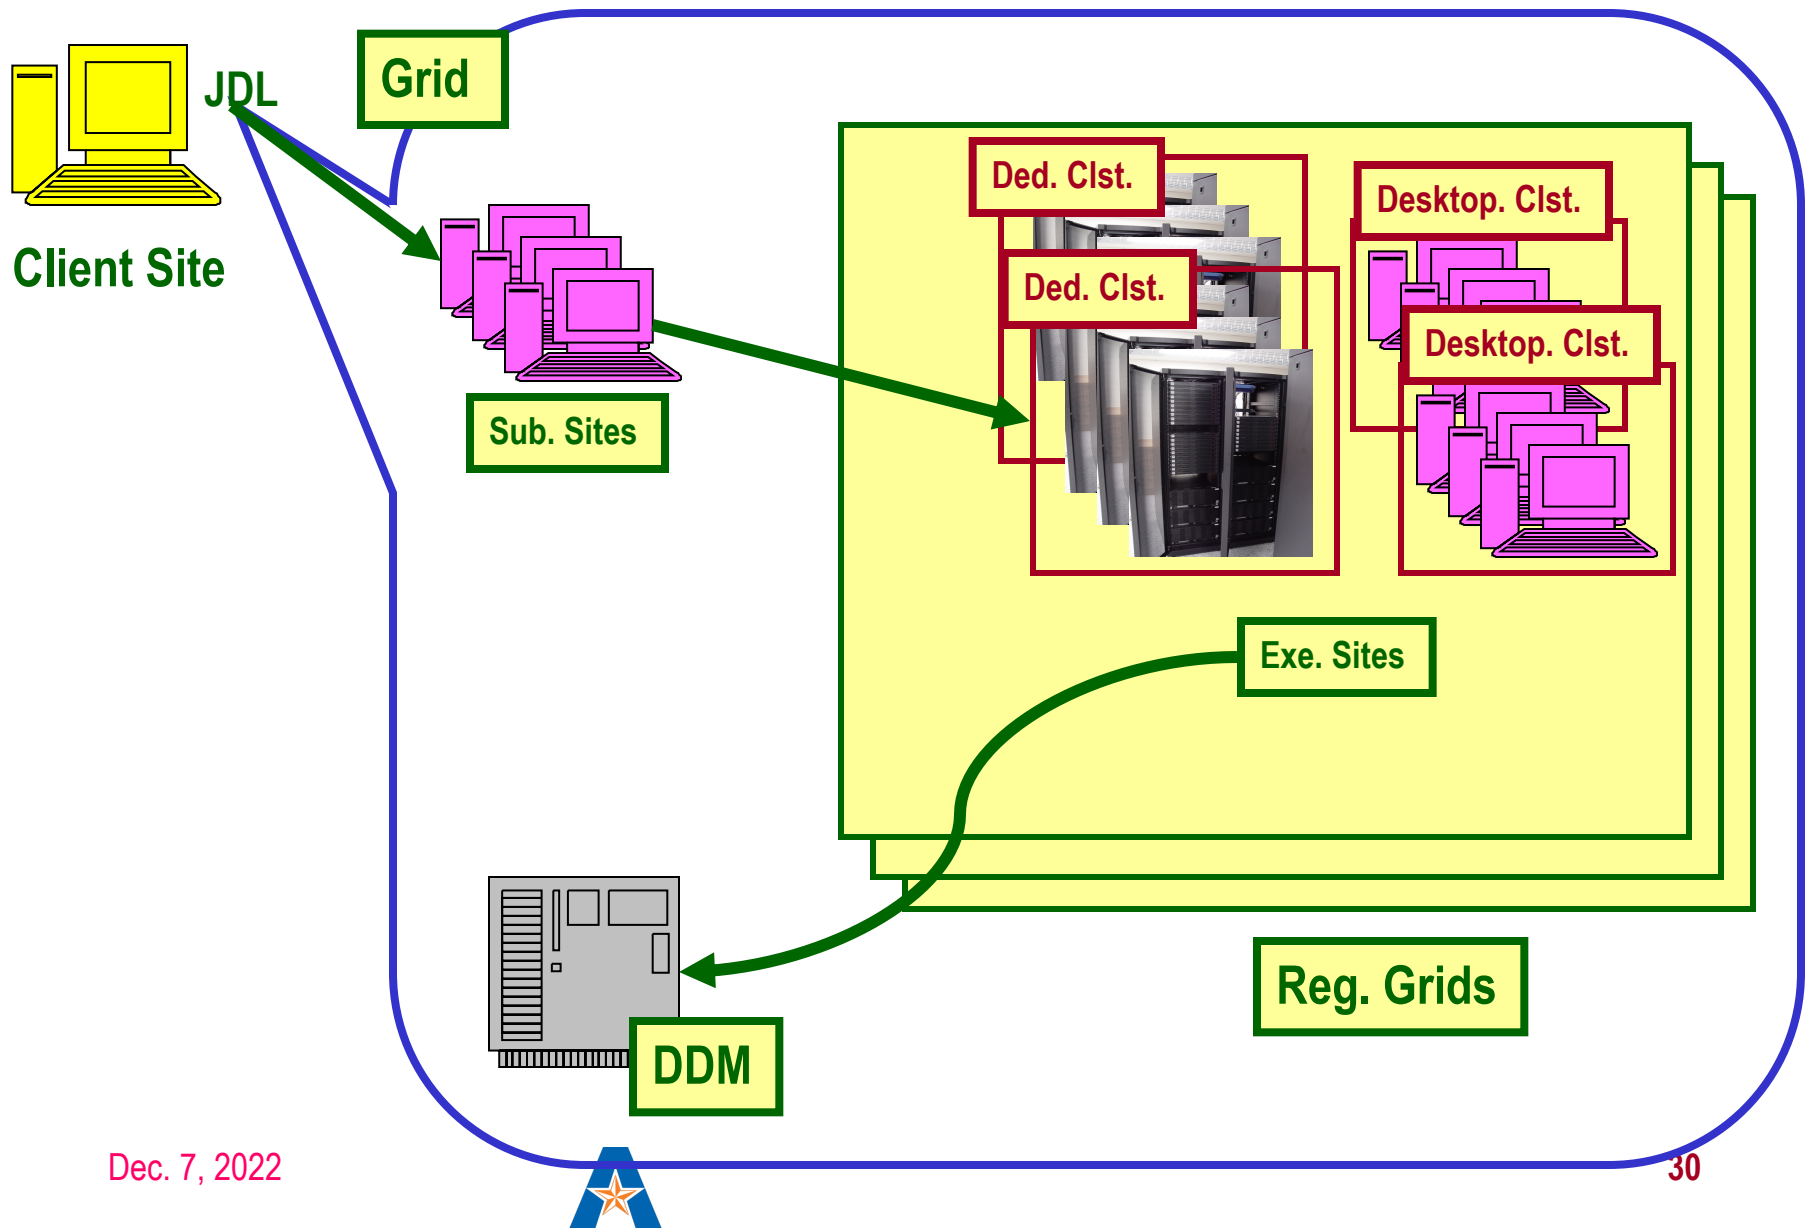

What is a Computing Grid?

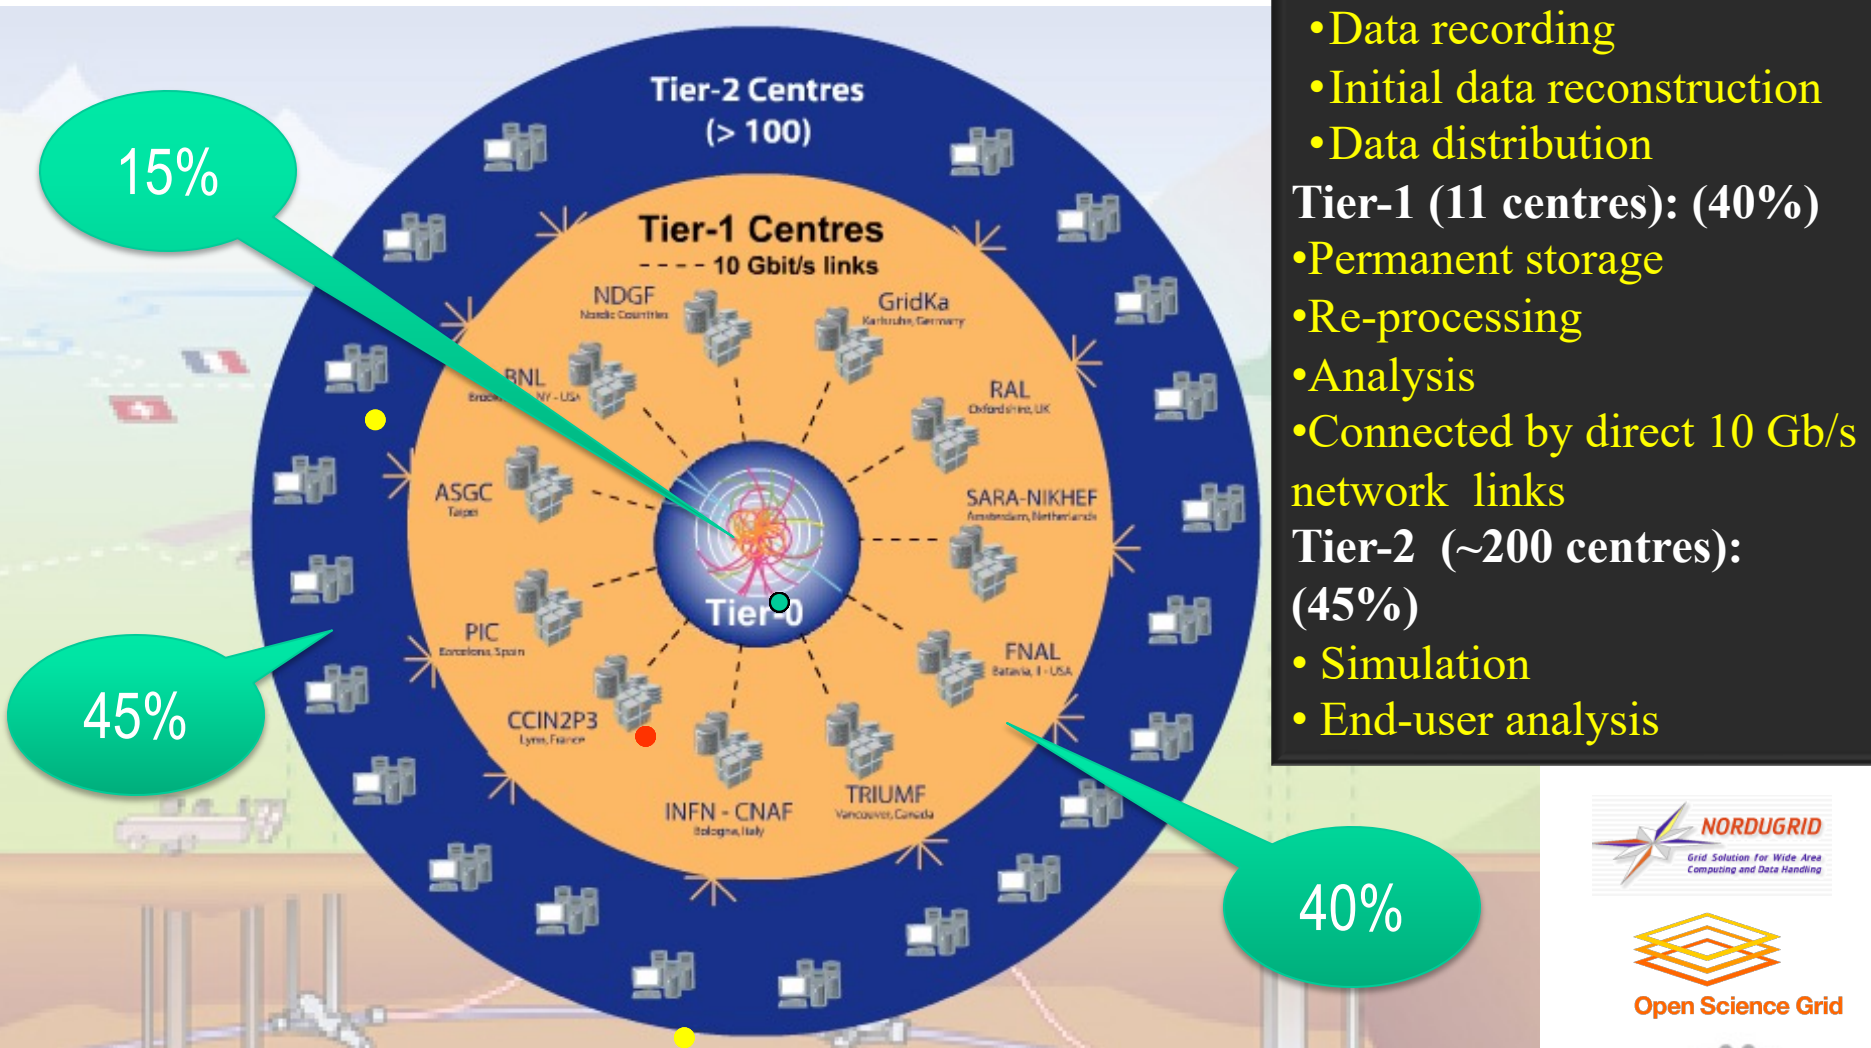

- Grid, the definition: Geographically distributed computing resources configured for a coordinated use
- Physical resources & good network provide hardware capability
- The “Middleware” software ties them together

How does a computing Grid work?

Implemented ATLAS Grid Structure

Dec. 7, 2022

HTC, HEP & the Society
Dr. Jaehoon Yu

How to look for rare particles?

- Many of these rare particles are so heavy they decay into other lighter particles instantaneously
- When one searches for a new particle, one looks for the easiest way to get at them
- Of many signatures of the rare particle final states, some are much easier to find → e.g. for the Standard Model Higgs particle
 - $H \rightarrow \gamma\gamma$
 - $H \rightarrow ZZ^* \rightarrow 4e, 4\mu, 2e2\mu, 2e2\nu$ and $2\mu2\nu$
 - $H \rightarrow WW^* \rightarrow 2e2\nu$ and $2\mu2\nu$
 - And many more complicated signatures

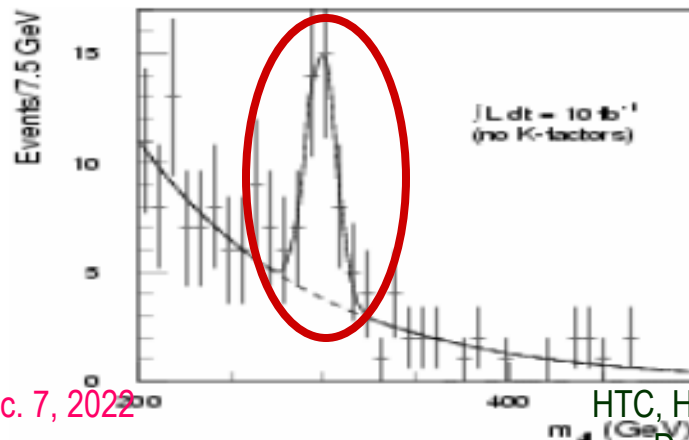

How do we look for a rare particle?

1. Identify Higgs candidate events

2. Understand fakes (backgrounds)

3. Look for a bump!!

– Large amount of data absolutely critical

Amount of the LHC Data

Dec. 7, 2022

HTC, HEP & the Society
Dr. Jaehoon Yu

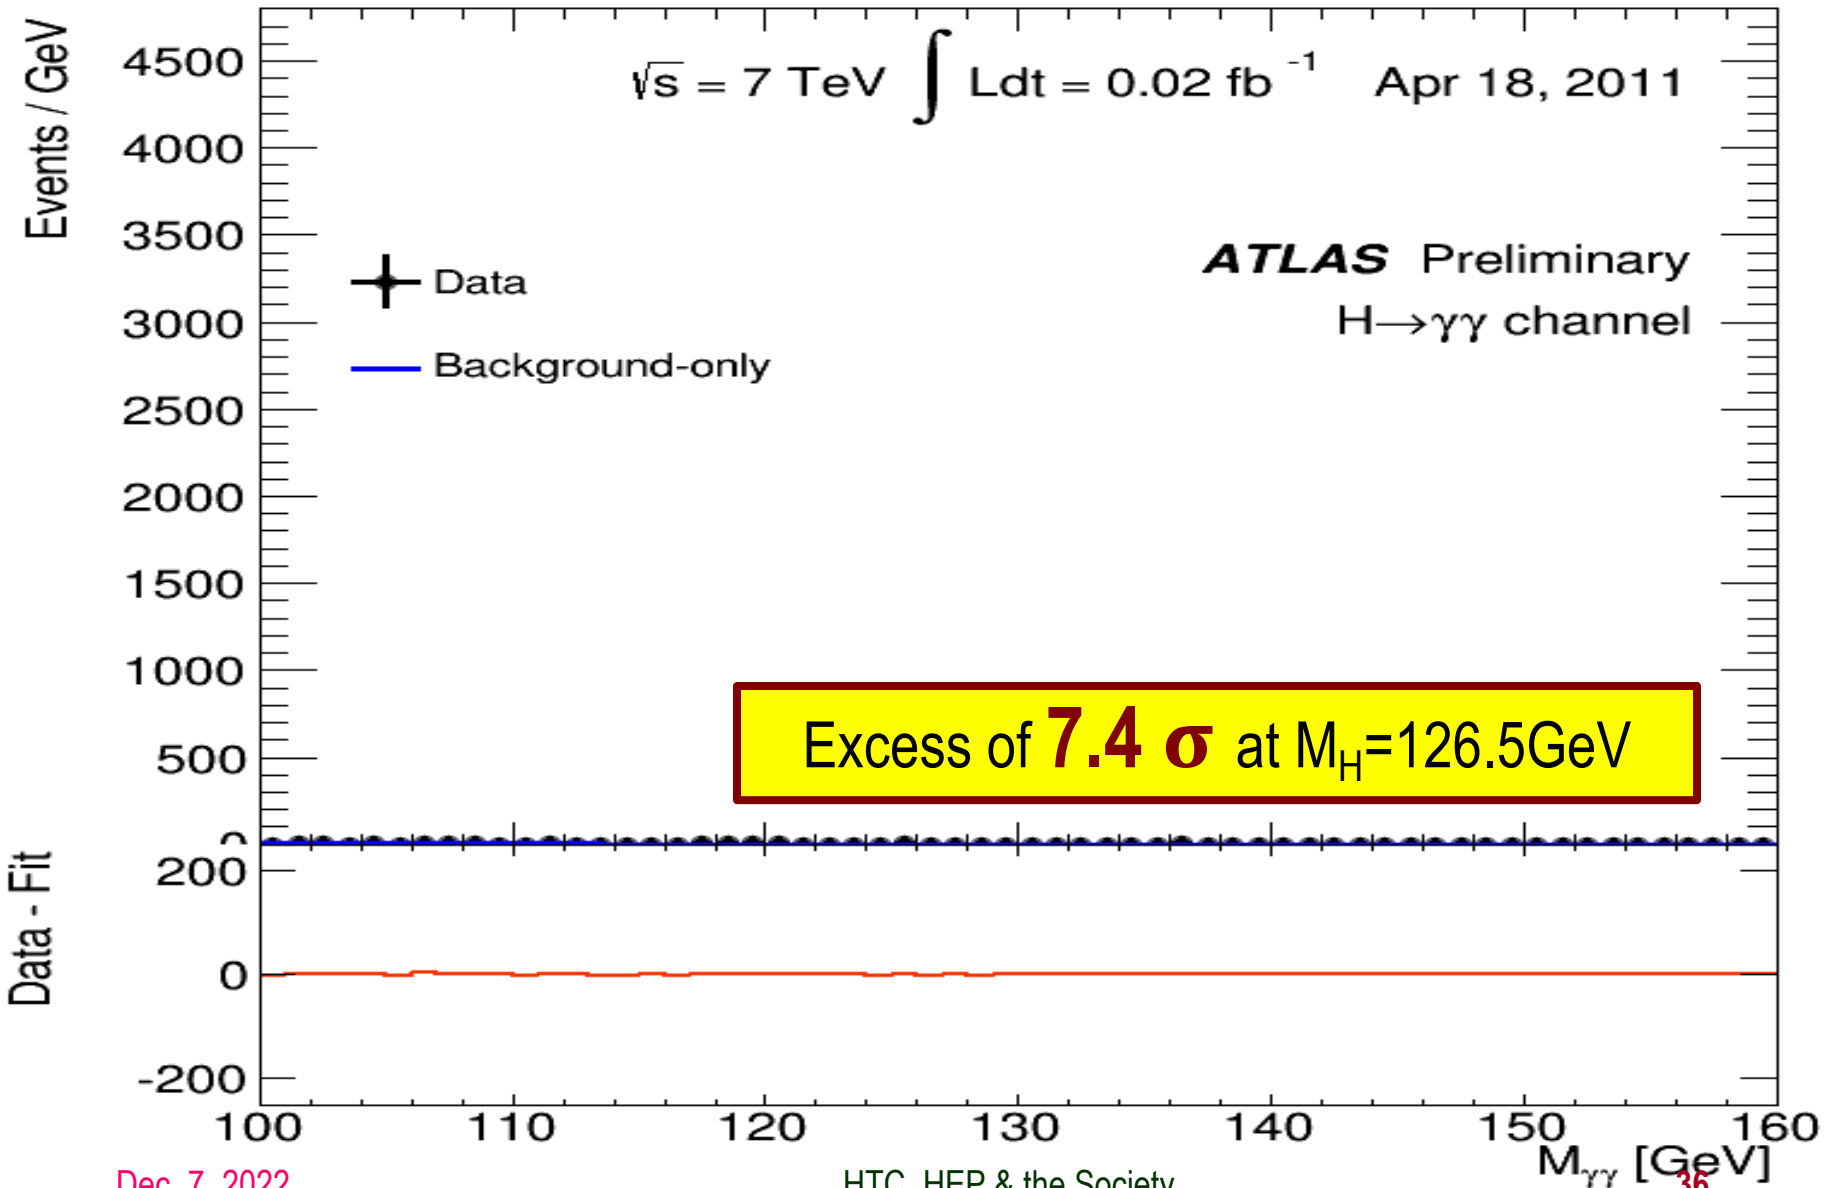

Challenges? No problem!

An interesting collision event with 25 collisions at once!!

Here it is!!

The image displays a dense network of nodes and edges, representing a complex system. The nodes are small colored squares (red, green, blue, yellow, orange, purple) arranged in a horizontal line. From each node, a large number of thin, multi-colored lines (edges) radiate outwards, creating a complex web. Two thick yellow lines are drawn from the leftmost node, extending upwards and downwards. A yellow arrow points to the leftmost node with the text 'Here it is!!'. A yellow box at the top contains the text 'An interesting collision event with 25 collisions at once!!'. The background is black.

What did statistics do for Higgs $\rightarrow \gamma\gamma$?

Dr. Jaehoon Yu

So why is HEP relevant to me?

- HEP explores the most fundamental nature of the universe!
- The discovery of the dark matter and making of dark matter beams will take us to the next quantum level
- Discoveries will realize our 1000 year dreams
- Outcome and bi-products of HEP research improves our daily lives directly and indirectly
 - WWW came from HEP

**WHERE THE
WEB
WAS BORN**

In the Office of the Director, at the Department of Computer Science at the Massachusetts Institute of Technology, in 1989, the Office was the location where the World Wide Web was born.

Started in 1989, the Office was a central hub for the development of the World Wide Web. It was here that the first web browser, the first web server, and the first web page were created. The Office was also the site of the first web conference, the first web journal, and the first web magazine.

In 1990, the Office was joined by the first web developer, the first web designer, and the first web programmer. The Office was also the site of the first web application, the first web database, and the first web search engine.

In the end of 1989, the Office was joined by the first web user, the first web publisher, and the first web subscriber. The Office was also the site of the first web community, the first web network, and the first web organization.

In 1991, the Office was joined by the first web content creator, the first web content manager, and the first web content distributor. The Office was also the site of the first web content creator, the first web content manager, and the first web content distributor.

The Office was also the site of the first web content creator, the first web content manager, and the first web content distributor.

The Office was also the site of the first web content creator, the first web content manager, and the first web content distributor.

The Office was also the site of the first web content creator, the first web content manager, and the first web content distributor.

The Office was also the site of the first web content creator, the first web content manager, and the first web content distributor.

Dr. Jaehoon Yu

So why is HEP relevant to me?

- HEP explores the most fundamentals of the Universe!
- Discoveries will realize our 1000 year dreams
- The discovery of the dark matter and making of dark matter beams will take us to the next Quantum level
- Outcome and bi-products of HEP research improves our daily lives directly and indirectly
 - WWW came from HEP
 - Advanced detector technologies like GEM will make a large screen low dosage X-ray imaging possible

Bi-product of High Energy Physics Research

Can you tell what the object is?
(GEM Detector X-ray Image)

Dec. 7, 2022

HTC, HEP
Dr. Jaehoon Yu

So are we done with the HTC?

- LHC has performed extremely well!
- The data size will increase by over 10 fold in HLLHC
 - Computing will be stressed even further!!
- Grid computing infrastructure has served well thus far
 - LHC users process PBs of data & billions of jobs
- High Intensity, large scale experiments, such as DUNE will record even larger amount of data than the LHC
- Identified limits in databases scalability, CPU resources, storage utilization, etc, are being addressed
- Utilization of quantum computing and machine learning technologies actively sought

Conclusions

- HEP is an exciting endeavor in understanding the universe
- In the quest for the origin of the universe, High Energy Physics
 - Uses accelerators to “look” into extremely small distances
 - Uses large detectors to explore nature and uncover secrets of universe
 - Uses large number of computers to process data in a timely fashion
 - Large amount of accumulated data → **computing grid** performed marvelously for expeditious data analyses
- Physics analyses at one’s own desktop using computing grid sitting behind has happened and is improving fast!!
- Computing grid used in other disciplines with large data sets
- Computing grid fully integrated into everyday lives
 - The pandemic accelerated this process
- A true computing grid is revolutionizing everyday lives

HEP's Impacts to the Society?

- WWW and other advanced computing technologies from HEP greatly reduced the physical distances between us
 - Help freeing oppressed people and protecting their freedom
 - Keeping people from being imprisoned by their physical limitations or even by a pandemic
- HTC generates pettrillions (=1000 trillions) dollars of economy
- Data science becomes a major area of education
 - Helps recording and analyzing enormous data in the COVID-19 fight
- All these technologies that can do good things, however, are instead harmful if used by those lack humanity and fundamental human decency
 - See how spreading misinformation hurts the very humanity we care!!
- **Be a good person first with a heart toward the good of humanity**

**Let's all dream,
not just for tomorrow,
not even just for the next year,
but for 1000 years into the
future for the whole humanity!!**

FFT: Number of beam particles per sec?

- What is the number of particles per second for an accelerator facility that can provide:

- **P** MW of total beam power
- of charged particles of energy **E** GeV?

$$N_p \left(\text{/sec}; E \text{ GeV}; P \text{ MW} \right) = P/E \cdot 6.3 \times 10^{15} \left(\text{particles/sec} \right)$$

- What is the number of protons per second for 120GeV beams at 1.2MW?

$$\begin{aligned} N_p \left(\text{/sec}; 120 \text{ GeV}; 1.2 \text{ MW} \right) &= \frac{1.2}{120} \cdot 6.3 \times 10^{15} \left(\text{particles/sec} \right) \\ &= 6.3 \times 10^{13} \left(\text{particles/sec} \right) \end{aligned}$$

- What is the beam current? $I = N_p \cdot 1.6 \times 10^{-19}$
 $= 1.2 \times 10^{-5} \left(\text{C/sec} \right) = 12 \mu\text{A}$

DUNE Near Detector Complex

- Phase I ND consists of [LAr TPC ($M_A=150t, V_A=105m^3$)] – TMS, making up the **PRISM** – SAND
- Phase II Full Suite ND consists of [LAr TPC - Magnetized (0.5T) large volume HP-GAr TPC (10atm – $M_A=1t, V_A=108m^3$) w/ ECAL, making up the **PRISM**] – SAND

Data Management Software Performance
